

NON-STICK SURFACE FOR INDUSTRIAL ROLLERS

Fluoropolymers, sometimes referred to simply as TEFLON, are used for their unique properties such as: non-stick, low friction, chemical and heat resistance. In the form of heat shrinkable sleeves they are used for applications on rollers, pipes, rods, hoses, etc. They are also a suitable solution for the rubber surface of cylinders.

- + Non-stick surface
- + Lower maintenance cost
- + Reduction or prevention of adhesion of lacquers, adhesives, dispersions etc.
- + Easy to clean
- + Significantly improves roller lifetime
- + Resistant against aggressive chemicals

Heat shrinkable sleeves are especially used in the paper, food and textile industries. They are also used by producers of foil and lamination technology.
